

Abstract

A viscous solution which serves as a catalyst or facilitator to apply any dry granular, flaked, shaved or powder substance (Spice), to the rim of plastic and glass drink-ware. To apply said Spice on drink-ware made from materials commonly used in the manufacture of drink-ware and used in widespread dining / drinking environments including; plastic, glass, porcelain, ceramic, paper, wax coated, etc., and to apply said Spice in a manner that permits a more evenly distributed Spice application that resists or reduces possible dripping down the drink-ware and protects the Spice from saturation or contamination from the Solution.
